

TEAM AGREEMENT TEMPLATE & GUIDELINES
For

Project Classical Supervised ML

Prepared by: Alen, Ananth and Nev

Team Number & Name: Team 02H & Project Classical Supervised ML

Team Member 1: Alen James n12837075

Team Member 2: Neville Doyle n12717991

Team Member 3: Ananth Naidu

Due date: 27 August 2026, 11:59am

Sign-off and Approvals

Team Agreement Sign-Off:		
The undersigned members of this team agree to abide by this team agreement to ensure the successful completion of the Project Classical Supervised ML project to meet the client's requirements and timeframes.		
Student number & name	Signature	Date
n12837075 – Alen James		26-Aug-2026
n12717991 - Nev Doyle	NJD	27-Aug-2026

Document Change History

Revision Number	Date of Issue	Author(s)	Brief Description of Change
0.1	6-Aug-2026	AJ	Initial meet and greet with Nev; discussed suitable external communication methods for the team.
0.2	11-Aug-2026	ND	Team meeting to discuss the assignment plan, task allocation and overall structure.
0.3	14-Aug-2026	AJ	Team meeting to provide progress updates for Tasks 1 and 2 and confirm next steps.
0.4	15-Aug-2026	AN	New team member Anand joined; first contact made and group chat link shared for meetings and ongoing updates.
0.5	16-Aug-2026	Team	Team catch-up to compare work and preprocessing results; similar results across members indicated the team was on the right track.
0.6	18-Aug-2026	AJ	Quick team update regarding the team-member situation and the extension request.
0.7	21-Aug-2026	ND	Quick update on Tasks 3–4, including review of graphs and results.
0.8	26-Aug-2026	AJ	Quick update focused on reducing unnecessary repetitive information and reviewing decisions for Task 5.
1.0	26-Aug-2026	AJ	Team Agreement updated for submission, including agreed principles, processes, non-compliance and conflict-management arrangements.

Instructions: You should use this template to plan and discuss your team agreement by substituting and adding your own ideas and text wherever there are italics throughout the document.

1 Introduction

The purpose of this document is to discuss and agree on the operating norms (principles and communication processes) for Team 02H who are a team of students in IFQ580 - Machine Learning.

The aim of the team agreement is to describe the principles underpinning effective teamwork and how they will be applied by this team during the Project Classical Supervised ML project. In this way the agreement provides a communication tool and contract between team members and their teaching team regarding their obligations, responsibilities, activities and grades to ensure successful processes, product, and outcome.

This document includes:

- High level principles contributing to an effective team;
- Agreed communication and operational processes to action the principles.
- Definitions of minor and major non-compliance and examples of instances that may constitute a breach of the agreement's conditions.
- Dispute resolution and conflict management processes.

2 Team Agreement

All team members must have participated in the formulation of this Team Agreement and are committed to abide by it.

2.1 Team Principles and Processes

The team agreed to the following principles and operational processes to support effective collaboration throughout the assignment.

EXPLANATORY NOTES:

Principles should be high level statements that describe what your team considers to be the key values, beliefs and norms that contribute to an effective team environment. For example you may adopt a principle that is "show respect for one another".

Each principle should be accompanied by a rationale that explains why your team has agreed to follow the stated principle. For example, the rationale that explains the adoption of a "Respect" principle is: a healthy atmosphere will facilitate positive team outcomes.

Operational processes should show how the principles will be put into action or implemented and

made workable by your team during the project. Examples of the operational processes associated with the Respect principle above may include: listen to each others ideas, avoid abusive language, try not to dominate the other team members, etc.

Principle 1 (What): Respectful and inclusive communication.

Rationale (Why): Professional and respectful communication allows all team members to contribute ideas, ask questions and resolve differences constructively.

Operational Processes (How):

- Listen to each member's ideas and provide equal opportunity to contribute.
- Use respectful language and constructive feedback.
- Discuss disagreements based on the assignment evidence and requirements rather than personal criticism.

Principle 2 (What): Reliable communication and progress updates.

Rationale (Why): Regular communication helps the team identify issues early, coordinate tasks and keep the assignment progressing toward deadlines.

Operational Processes (How):

- Use the agreed group chat as the main external communication channel for meetings, updates and shared information.
- Hold team meetings or quick updates as required and communicate progress between meetings.
- Advise the group as early as possible if a member cannot attend, complete a task, or meet an agreed deadline.

Principle 3 (What): Shared responsibility, quality and collaboration.

Rationale (Why): Comparing work and reviewing each other's outputs improves consistency, reduces errors and supports an equitable contribution to the final submission.

Operational Processes (How):

- Allocate work according to the assignment tasks and agreed team plan.
- Share relevant results, graphs and findings so that members can compare outcomes and identify inconsistencies.
- Review and edit the combined report to remove repetition and ensure the final work is coherent and meets assignment requirements.

2.2 Non-Compliance

Minor non-compliance is an occasional or low-impact failure to meet an agreed team commitment that can be corrected without materially affecting the assignment. Examples include being late to a meeting without prior notice, a delayed progress update, a short delay in completing an assigned section, or not responding to a group message within a reasonable timeframe. The member should communicate the issue and complete the outstanding action as soon as practicable.

Major non-compliance is repeated or serious failure to meet agreed responsibilities that creates a significant risk to the team's ability to complete the assignment successfully. Examples include repeatedly missing agreed deadlines without communication, failing to contribute assigned work, prolonged non-response to team communication, submitting unusable or incomplete work after requests for correction, or conduct that significantly disrupts team collaboration.

2.3 Dispute Resolution & Conflict Management

Minor or major non-compliance may lead to disagreement or conflict between team members. The team will manage issues professionally, with the aim of resolving them early and maintaining progress on the assignment.

For minor breaches, the issue will first be raised directly and respectfully with the relevant member through the group chat or at a team meeting. The member will be given an opportunity to explain the situation and agree on a reasonable corrective action or revised deadline. Repeated minor breaches will be documented and may be treated as major non-compliance.

For major breaches, the team will discuss the issue collectively, document the concern and attempt to agree on a fair resolution. Where the issue cannot be resolved internally, the matter may be escalated to the teaching team in accordance with QUT processes. Any impact on peer appraisal or marks will be based on the documented level of contribution and the requirements of the unit.

2.4 Peer Appraisal

	Student 1	Student 2	Student 3
Student 1			
Student 2			
Student 3			

Peer appraisal is intentionally left blank for team members to complete based on each person's final contribution to the group work.

3. Conclusion

This document articulates the high-level principles and operational processes agreed to by the project team. The agreement applies for the duration of the assignment. To meet the assignment objectives and work professionally as an IT project team, members will follow the communication, collaboration, quality, non-compliance and conflict-management processes described above. The agreement may also support peer appraisal and the resolution of any contribution disputes.

Appendix – Team Agreement Guidelines

In order for your team to achieve its common goals, to coordinate activities and to enable group synergy, your team and its members must communicate regularly and abide by mutually acceptable and beneficial principles of behaviour.

Team members can negotiate team principles and operational process and record these conditions in their Team Agreement. In developing the Team Agreement team members must also agree what constitutes a major breach of (non-compliance with) of agreed behaviours, the penalties for such breaches.

Some possible topics for consideration in the Team Agreement are listed below. Your team should develop principles and operational processes and any other relevant items you think are necessary to establish the “rules” by which your team will operate. A template is available to help you identify content items and structure your agreement.

Possible Topics for Agreement Principles

The guiding principles you develop might address the following issues:

- Your team goals (How you will define success. What level of achievement / grade does your team want for this project);
- How your team will reach consensus when decision-making;
- How the team will manage & resolve differences of opinion. (Will the team require all individuals to accept the team's view?);
- How you will get quiet team members or students who have English as a second language to actively contribute to team discussions;
- How team members will share knowledge and actively collaborate with other team members to ensure collaboration;
- How tasks will be allocated and how work will be completed (will you work according to the project plan, or use an event-driven informal process?);
- How your team will resolve or accept personal or professional differences;
- The process or channel will you use to escalate issues that the team cannot resolve;
- Will your team have a team leader role? And if so what are their responsibilities and how will they be supported, rewarded or compensated for their additional work load.
- Equitable workload for team work.
- Will the team accept freeloaders (people who do no work on the project), how will you

identify them, and what are you going to do about them?

- Ensure that work is done to an acceptable level of quality and meets the project's requirements;
- What process will you follow to deal with poor quality or late work;
- What you will do if members make significantly different contributions in terms of quantity or quality of work;
- etc

Communication and Operational Process Topics

Your team communication and operational processes should explain in detail how the principles you have stated are put into operation. They might include statements that include:

- How often your team meetings will be held, where, what time & for how long;
- What regular agenda categories will be discussed at each meeting (eg progress made, issues);
- Who will record the team meetings (eg meeting date, attendees, issues discussed, decisions, actions) and enter the data in TeamWorker when necessary;
- Will the team use an issues register to track the resolution of project, team and technical issues; if so how will this work.
- How often team members will communicate with each other;
- How team members will communicate between meetings;
- How often team members will check their email or voice mail;
- The timeframes team members will accept as reasonable to respond to email or voice mail messages;
- How team members will update each other with progress made, especially if they cannot attend a meeting;
- What a team member should do if he/she cannot meet his/her assigned tasks and deadlines;
- How the project plan will be updated to reflect actions completed and new actions assigned and who is responsible for these updates;
- Will a project library be established to contain electronic and/or print versions of documents and emails and who is responsible for maintaining this resource;
- etc

Defining Major and Minor Non-Compliance

This section should assist you manage team and individual behaviours. Your team should agree how this section should be completed and what items it may include. It is up to you!

You might start by defining and providing examples of what the team considers to be major or minor non-compliance, i.e. a breach of one of Agreement principles or communication processes (e.g. being more than 5 working days overdue with agreed deadlines, freeloading, not responding to emails etc).

Penalties for Major and Minor Non-Compliance

This is up to your team to agree and propose penalties. The team must then take responsibility for applying the agreed penalties. You may agree to deal with major breaches by reallocating an agreed percentage of marks, or even expulsion from the group.

You may agree to allow a small number of minor transgressions occur without penalty as long as team members behave appropriately & professionally.
